Managing Emerald Ash Borer: Decision Guide

Begin with an inventory of your ash trees
- How many?
- Where are they?

Are some worth saving?
- Valuable to landscape or owner?
- Healthy and few signs of EAB?
- Located in the right site?

Yes. No.

Do you want to save your ash trees from EAB?

Yes. No.

Ash trees will be killed and need to be cut down.

Yes. No.

Hire a Tree Care Professional
- Get at least two estimates
- Hire a certified professional
- Ask for references and insurance

To find one in your area visit: www.treesaregood.com

Team up with your neighbors and seek discounts for managing all your trees at once!

Determine how big your trees are. Get DBH.
Measure the distance around the trunk (at 4.5 ft. above the ground) and divide it by three to get Diameter at Breast Height.

Are they greater than 20 in. DBH?

Yes. No.

Homeowners can treat trees OR hire a professional.
Use a soil drench containing imidacloprid. Treat trees between April 1st and May 15th. Always follow all insecticide label directions.

Managing Emerald Ash Borer: Decision Guide

Which trees can be saved?

Trees CAN be saved if they are:
- Healthy and vigorously growing, with more than half their leaves.
- Enhancing the landscape.
- Valuable to the owner.
- Showing only few outward signs of EAB infestation.

Trees should NOT be saved if they are:
- Unhealthy, with more than half of their leaves missing.
- Planted in poor sites or are not important to the landscape.
- Showing many outward signs of EAB infestation, such as woodpecker damage, bark splits, and water sprouts at the tree base.

What are the treatment options?

Homeowners can protect healthy ash trees:
- With a trunk less than 20 in. Diameter at Breast Height (see reverse for DBH measurement).
- With over the counter soil drench products containing 1.47% imidacloprid. These products are most effective when applied between April 1st and May 15th.

Professionals can protect ash trees:
- With a trunk DBH of up to 20 inches or greater
- Later in the year, and/or by using specialized equipment to apply pesticides that contain imidacloprid, dinotefuran, azadirachtin, or emamectin benzoate.

Which new trees should be planted?

Choose a tree that can thrive in your site conditions. Remember that some trees can become very large. Contact your city forester, or local garden center or nursery for advice on choosing the best species to replace your ash. Also look for ideas at our link to replacement species on <www.eabindiana.info>.

Contact your city forester about local ordinances before performing any tree work!

REMEMBER: Choose Diversity!
Replant with several different tree species to increase your neighborhood’s resilience to future pest problems.
